Passenger Transportation Board
MOVING FORWARD, TOGETHER

Reminder: Taxi licensees must replace old meters

March 12, 2026

The Passenger Transportation Board wishes to remind all taxi licensees that new standards for taxi meters will take effect on May 1, 2026.

As of that date, analogue taxi meters and some early digital-electronic taxi meters will no longer be permitted.

To give taxi licensees plenty of time to modernize their meters, the Board provided notice on February 4, 2025 that these new meter standards would be taking effect on May 1, 2026.

Taxi licensees on the data in communities under 10,000 list will be provided with a longer timeline, to be determined. However, these licensees are also encouraged to modernize their businesses so that they can later provide trip data submissions.

Why did the Board make this decision?

Analogue and early digital-electronic taxi meters do not fully support compliance with data requirements in the Passenger Transportation Act and established by the Board. They are also not as reliable or transparent to passengers, and they lack other capabilities. They are also no longer sold or supported by manufacturers.

What is an analogue taxi meter?

An analogue taxi meter is a mechanical device that lacks electronic capabilities and does not function with a dispatch system. Analogue meters cannot collect trip level data and cannot connect to external

devices such as point-of-sale devices and receipt printers.

Which digital-electronic meters will no longer be permitted?

Digital-electronic taxi meters, that cannot collect and store the following trip-level data (at minimum), will be prohibited on and after May 1, 2026:

- Trip distance (in kilometers)
- Trip duration (in minutes and seconds)
- Total fare amount (in Canadian dollars)

As of February 4, 2025, some licensees had early digital-electronic taxi meters with electronic components and digital screens that displayed fare information. However, some of these digital-electronic meters still lacked data collection capabilities and compatibility with other technologies. Those digital-electronic meters will not be compliant with the new meter standards taking effect on May 1, 2026.

How and when to replace your taxi meters

Taxi licensees have until May 1, 2026 to replace analogue and digital-electronic meters that do not support data compliance.

Taxi associations and businesses across B.C. are aware of taxi meter service providers and experienced individuals that provide taxi meter and other equipment services.

If licensees are unsure whether there are services available in their area, they should connect with their contacts in the taxi sector for assistance. The Board does not formally authorize or offer accreditation to taxi meter service providers in B.C.
